CTS: Computer Technology And Skills Courses

Courses

CTS 1120  Introduction to Network Security
3 sh (may not be repeated for credit)
Prerequisite: CNT 1000
Introduction to concepts of computer and network security and currently available technologies, mitigating threats, asset protection techniques against threats.

CTS 3159  End User Support
3 sh (may not be repeated for credit)
Prerequisite: COP 2334 OR COP 2253 OR COP 2830
An applied course pertaining to the usual activities that are involved in supporting end users of computers. Addresses the technical capabilities a support specialist needs and the "soft skills" necessary when dealing with clients. Topics include computer facility management, customer service skills, user needs analysis, installing and troubleshooting computer systems, help desk organization, product evaluation, and user training.

CTS 4348  Linux System Administration
3 sh (may not be repeated for credit)
Prerequisite: COP 4634 OR COP 4610
This course focuses on the installation, configuration, and maintenance of modern, open-source operating systems in individual and corporate environments including computer networks that host a variety of servers and workstations. Through hands-on experience, students will learn how a Linux operating system works and how it can be put to use to serve computing needs. Students will also learn how to configure network environments to test the networking capabilities of the operating system. Course may be offered concurrently with CTS 5349 and credit will not be given for both CTS 4348 and CTS 5349.

CTS 4817  Web Server Administration
3 sh (may not be repeated for credit)
Prerequisite: COP 2334 OR COP 2253 OR COP 2830
An overview of essential skills in web server administration. Topics include installation and configuration of client web servers, user creation and login authentication, configuration of applications, security, management of user permissions.

CTS 5349  Linux System Administration
3 sh (may not be repeated for credit)
This course focuses on the installation, configuration, and maintenance of modern, open-source operating systems in individual and corporate environments including computer networks that host a variety of servers and workstations. Through hands-on experience, students will learn how a Linux operating system works and how it can be put to use to serve computing needs. Students will also learn how to configure network environments to test the networking capabilities of the operating system. Offered concurrently with CTS 4348; graduate students will be assigned additional work.
